

# ABSTRACT

When the printer 10 receives a request signal from one of the administrative computer G and the computers 20 indicating that the user has used the mouse 53 to click the "Edit" button displayed on the CRT monitor 55 (S4), then the printer 10 transmits data for the edit wizard 201 for modifying setting items displayed in the print function settings wizard 202 to the administrative computer G or the computer 20 corresponding to the ID data set attached to the request signal. The user uses the mouse 53 to click on either "Display on" or "Display off" next to each setting item in the edit wizard 201 displayed on the CRT monitor 55 (S6), enabling the user to re-edit setting items displayed in the print function settings wizard 202 (S7-S13).
